Professional Summary

Backend Software Engineer with about **3 years of experience** building and maintaining high-traffic backend systems. Skilled in setting up **data pipelines**, organizing **background task queues**, and handling complex **payment integrations** for platforms with over **2 million users**. Strong track record of writing clean code and coordinating directly with external partners and payment providers. Proven track record in technical leadership and delivering scalable, distributed solutions in **Go** and **Python**. Open to relocation with visa sponsorship.

Work Experience

Top | Jan 2025 – Jul 2026

- **Tech Stack:** Python, FastAPI, PostgreSQL

Payments & B2C Platform

- **Payment Provider Integration:** Built and maintained payment services for a platform with over **2 million users**, integrating multiple **Payment Service Providers (PSPs)**.
- **External Partner Communication:** Worked directly with technical teams at external payment companies to solve integration issues and maintain high service reliability.
- **Custom User Logic:** Developed backend rules to handle complex user flows (corporate accounts, accessibility needs) and engineered resilient logic for **payments and refunds**.

User Analytics & Recommender Engine

- **Automated User Journeys:** Built and maintained a targeted recommendation system optimized for **A/B testing**, powered by **FastAPI**, **ClickHouse**, **RabbitMQ**, and **Redis**.

Messaging System

- Worked and coded on a priority-managed messaging system (SMS & Push) using **Redis Streams** for efficient, real-time message queuing.

Background Tasks & Logging

- **Fixed Queue Issues:** Solved long-standing compatibility problems between **RabbitMQ** and **Celery** for long-running background tasks by writing a custom solution in **pure Python**.
-

Kapa (Non-Profit Organization)

- **Tech Stack:** Python, Django, PostgreSQL

Game Logic Handler System for Competition

- Designed a powerful backend for a competition event managed by Kapa named *Tahe-Nakh* involving at least **160 players every year**.
-

Open Source

- **Connect4**: A Go WebSocket multiplexing library for efficient real-time communications.
 - **Pure Python scheduler**: A Python script with the lowest overhead and deps to handle lots of tasks in a recomm system
-

Technical Skills

- **Languages**: Python
 - **Frameworks & Protocols**: FastAPI, Django, REST, WebSocket
 - **Databases & Caching**: PostgreSQL, ClickHouse, Redis
 - **Messaging & Streaming**: RabbitMQ, Redis Streams
 - **Architecture**: Distributed systems, microservices, event-driven design
 - **DevOps**: Linux, Docker, Git, CI/CD (Good enough for dev usage)
 - **Security**: JWT
-

Soft Skills

- **Cross-Functional Communication**: Worked closely with customer support teams to rapidly troubleshoot and resolve production issues. There were lots of refund or payment issues which had to be checked as soon as possible.
 - **Supplier & Partner Coordination**: Directly managed communication with payment providers and suppliers to resolve complex refund discrepancies.
 - **Team Collaboration**: Recognized for a dependable, transparent, and collaborative engineering approach.
-

Education

- **Bachelor of Science in Computer Engineering** — Shiraz University of Technology
-

Languages

- **English**: Professional Working Proficiency
